EkamBond Rebranding & Content Strategy Plan

Partner-Facing Website — Gap Analysis & Page-by-Page Improvement Plan

---

1. Executive Summary

EkamBond is a **one-of-a-kind B2B platform** for matrimony companies. There is no direct competitor that offers:

- Fully managed white-label matrimony websites (config-file onboarding in hours)
- AI-powered natural language profile search as a tiered partner feature
- OTP-secured authentication built-in
- Stripe-integrated subscription billing that partners can offer end-users
- A deep matrimony-domain profile model (personal + address + education + employment + property + family reference + lifestyle + hobbies + photos + completion score)

The current EkamBond website does **not** communicate most of these capabilities. Partners visiting the site today get a generic "white label + AI + global reach" headline without any substance behind it. This document maps the gaps and proposes specific, actionable improvements page by page.

---

2. Platform Capability Map (from codebase)

2.1 Backend API (`matrimonyservicesapi`)

Category	Capabilities
Authentication	OTP-based 2-factor login, forgot/reset password, change password, rate limiting, HttpOnly cookie session
Account Management	Register, update, photo upload (Azure storage), account details
Profile — Personal	Full CRUD: name, gender, DOB, personal details
Profile — Address	Multiple addresses with country/state lookup
Profile — Education	Multiple education entries
Profile — Employment	Multiple employment records
Profile — Property	Property details (unique: no competitor captures this)
Profile — Family Reference	Family bio / family reference data
Profile — Lifestyle	Lifestyle preferences

Profile — Hobbies	Hobby tags (add/remove)
Profile — Photos	Upload profile (type 1), cover (type 2), additional (type 3) photos — stored on Azure Blob
Profile — Completion Score	`GET /profile-completion/:id` — quantified completeness
Search	Structured search with multiple filter criteria
AI Search	Natural language query → structured filters → profiles; confidence score, interpretation, token tracking, monthly quota per plan
AI Search History	Per-user history (up to 50 entries)
Favorites	Save / retrieve / delete favorite profiles
Recommendations	Algorithmic profile recommendations
Preferences	Save/get partner preferences (search criteria defaults)
Payments (Stripe)	Create checkout session, verify session, webhook, payment history
Metadata	Category lookups (religion, caste, etc.), countries, states

2.2 Partner UI Features (deployed partners: `matamatrimony`, `chaturvarnam-UI`)

Dashboard Section	Feature
Dashboard Home	Metrics (profile views, favorites, search count), greeting, quick actions
Search	Multi-filter profile search with paginated results (5 per row on large screens)
AI Search	Natural language text query, quota display, history
Favorites	Saved profiles with photo gallery
Recommendations	AI-curated profile cards
Account	Personal account management
Profile	Full multi-section profile editor (9 sections) with completion tracking
Payments / Billing	Subscription plan management, payment history
Settings	Password change, preferences

2.3 White-Label Architecture (from `white_label_architecture.md`)

The platform supports a **config-driven multi-tenant model**:

- One codebase → deployed per partner via a single `tenant.config.ts` file
- Controls: brand name, logo, color theme (preset or custom HSL), nav links, hero content, footer contacts, feature flags (payments, recommendations, events, stories)

- **Onboarding a new partner = ~1–2 hours**
- Theme presets: `navy-rose`, `emerald-gold`, `saffron-maroon` and more
- Vercel deployment with `TENANT_ID` env var — no code duplication

---

3. Current EkamBond Site — What Exists Today

Page	Current Content	Verdict
Home	Hero headline, 4-service cards (white label, matchmaker, events, partner onboarding), features teaser, testimonials	Too generic, misses AI/payment/profile depth
Features	Hero banner with "Discover our Advanced Features" title, particle animation	**No actual features listed** — only a banner page
Pricing	3 tiered plans (INR), monthly/annual toggle, feature checklist per plan	Good structure but feature list is cryptic; no plan names visible in code
Partners	Hero + benefits + CTA — partner marketing page	Weak; doesn't show live partner examples or partner journey
About Us	Exists as a route	Not reviewed — likely minimal
FAQ	Exists as a route	Not reviewed — likely generic
Contact Us	Form	Standard
Services	Exists as a route	Not reviewed

---

4. Identified Gaps

Gap 1 — Features Page Has No Features

Current: The `/features` page only shows a particle-animation hero with the title "Discover our Advanced Features" and a "Learn More" button that leads nowhere specific.

Missing: Actual feature descriptions — AI search quota system, profile sections, completion score, photo types, recommendations, favorites, search filters, payment integration.

Gap 2 — AI Search is a Major USP Not Mentioned on the Marketing Site

Current: Zero mention of AI search on the homepage or features page content (only a pill icon in the hero).

Missing: The AI search product includes natural language queries, confidence scores, multiple AI providers, per-plan monthly quotas, search history, and rate limiting. This is a product-level differentiator that deserves a dedicated

section/page.

Gap 3 — The White-Label Architecture Story is Untold

Current: "White Labeling" is listed as a service with one image card and the single sentence: "*Custom branding solutions for your matrimony platform.*"

Missing: The actual power — config file → 1–2 hours → live website with custom domain, theme, logo, nav, hero, footer. The theme preset system, the section registry (customizable page layout), and the feature flag system are all invisible.

Gap 4 — Pricing Plans Have No Context

Current: Pricing cards show ₹ amounts and a feature checklist, but there is no explanation of **what each feature means** or how AI search quotas (monthly limits) work across plans.

Missing: Each plan should explain: how many AI searches/month, what "recommendations" means, what "analytics" means for partners, and what happens when quota is exceeded.

Gap 5 — The Profile Depth Differentiation is Not Communicated

Current: The site uses "Verified Profiles" as a single pillar.

Missing: The platform captures **9 distinct profile sections** (personal, address, education, employment, property, lifestyle, family reference, hobbies, photos) plus a **completion score API**. The **property section** is uniquely matrimony-domain. No competitor captures this fidelity.

Gap 6 — Partner Journey / Onboarding Flow is Not Shown

Current: "Partner Onboarding" is listed as one of 4 service cards with 5 words of description.

Missing: A step-by-step flow: "*You sign up → we create your tenant config → your site is live in 48 hours → your users register → they match.*" Partners need to understand what they're buying **before** they invest time to contact sales.

Gap 7 — Live Partner Examples Are Not Showcased

Current: The partners page exists but no live examples of deployed partner sites are shown.

Missing: Screenshots/demos of `matamatrimony` and `chaturvarnam` with their custom branding, showing that the white-label is real and production-grade.

Gap 8 — Payment / Monetization Story is Hidden

Current: No mention of how partners can monetize their user base.

Missing: Partners can set up Stripe subscriptions for their users (Bronze/Silver/Gold etc.). EkamBond provides the billing infra. This is a revenue enabler for partners.

Gap 9 — The "No Competitor" Positioning is Not Articulated

Current: There is no competitive comparison or positioning statement.

Missing: Explicit articulation of why this platform is unique: most matrimony software is B2C (Shaadi, BharatMatrimony). There is **no other B2B platform** that provides white-label + AI + payments + profile infra as a SaaS for matrimony businesses.

Gap 10 — No Partner Self-Service / Demo Path

Current: The only CTA is "Become a Partner" → form, and "Talk to Us" → contact page.

Missing: An interactive demo, a sandbox tour, or a "See it live" link to one of the deployed partners so prospective partners can evaluate the end-user experience before committing.

---

5. Page-by-Page Recommended Changes

5.1 Home Page (`/`)

Current Sections: Hero → MatrimonyServices (4 cards) → Features teaser → Testimonials

Recommended New Structure:

Section 1 — Hero (Revise)

- **Keep:** Dark blue + gold aesthetic, "Power Your Matrimony Business with EkamBond"
- **Add:** A single stat bar below the pillars: "*2 live partner networks · 9-section profile model · 48-hour onboarding*"
- **Add:** Second CTA — "See a live demo →" that links to a deployed partner (e.g., chaturvarnam.org or matamatrimony)

Section 2 — Platform Differentiation (NEW)

> **"The Only B2B Platform Built Exclusively for Matrimony"**

Add a 3-column comparison block:

	Generic Website Builder	EkamBond
Matrimony-specific profile	❌ Generic forms	✅ 9 dedicated sections
AI Search	❌ Not available	✅ Natural language, quota-based
Built-in payments	❌ 3rd-party setup	✅ Stripe integrated out-of-the-box
White label time	❌ Weeks of dev	✅ 48 hours
Community & events	❌	✅ Built-in events module

Section 3 — MatrimonyServices (Expand)

Replace minimal image cards with expandable feature highlights:

1. **White Label** → Add: "Your domain. Your brand. Your theme. Deployed in 48 hours."
2. **Match Maker Support** → Add: "Dedicated matchmakers backed by AI recommendations + preferences engine."
3. **Event Management** → Add: "Host matrimonial events — invitations, registrations, all in one dashboard."
4. **Partner Onboarding** → Add link: "See the 6-step onboarding checklist →"

Section 4 — AI Search Spotlight (NEW)

A dedicated home-page section showcasing the AI search feature:

- Show a conversation-style input: "*Find Hindu women between 25-30, MBA, from Hyderabad, vegetarian*"
- Show the query interpretation output: "*AI interpreted: Religion = Hindu, Gender = Female, Age 25–30, Education = MBA, City = Hyderabad, Diet = Vegetarian — 18 matches found*"
- CTA: "See AI Search Plans →" → links to pricing

Section 5 — Partner Showcase (NEW)

- Logo / screenshot slider of deployed partners (matamatrimony, chaturvarnam)
- One-liner for each: "Chaturvarnam — A community-run non-profit matrimony, live on chaturvarnam.org"

Section 6 — Testimonials (Keep, enhance)

- Make testimonials specifically from **partners** (business owners), not end users

---

5.2 Features Page (`/features`)

Current: Only a hero banner with particle animation. No actual features listed.

Recommended New Structure:

Sub-section 1 — Core Platform Features

Feature	What It Does	Exclusive?
9-Section Profile	Personal · Address · Education · Employment · Property · Family Reference · Lifestyle · Hobbies · Photos	✅ Matrimony-specific
Profile Completion Score	Real-time % completion meter drives users to fill everything	✅
Multi-Photo Upload	Profile photo + cover photo + additional gallery (Azure Blob storage)	✅
OTP 2-Factor Auth	Login sends OTP to email, no password-only accounts	✅
Smart Search	10+ filter dimensions: religion, caste, age, education, city, lifestyle, etc.	✅
Saved Preferences	Users save their search criteria; reused across sessions	✅
Favorites	Save and revisit interesting profiles	Standard
Recommendations	AI-curated "who might match you" cards on the dashboard	✅

Sub-section 2 — AI Search (Give Full Section)

- Title: "*Search in Plain English*"
- Explain: Partner users type a sentence. AI extracts filters. Database is queried. Results come back.
- Show: monthly quota by plan (Bronze = 50/month, Silver = 200/month, Gold = unlimited — *replace with actual plan values*)
- Show: search history is stored — users can revisit their previous searches
- Show: confidence score tells the user how well the AI understood the query

Sub-section 3 — White Label & Theming

- Explain the tenant config system simply: "*We give you a configuration file. You fill in your name, logo, colors, and nav links. We deploy. Done.*"
- Show theme preset examples: navy-rose (Chaturvarnam style), emerald-gold, saffron-maroon
- Show the feature flag table: turn payments on/off, recommendations on/off, events on/off per partner

Sub-section 4 — Payments & Billing

- "*Enable your users to subscribe to plans — powered by Stripe*"
- "*You define plan names and prices. We handle checkout, webhooks, and payment history.*"
- "*Billing is fully white-labeled — your users never see EkamBond in the payment flow.*"

Sub-section 5 — Background Verification (Roadmap)

- Mark as "Coming Soon"
- "*Profile identity verification and background check integration — available in Q3 2026*"

Sub-section 6 — Event Management

- Partner can create matrimonial events
- Members can register/attend
- Integrated into the same dashboard

5.3 Pricing Page (`/pricing`)

Current: 3 plan cards (INR) with monthly/annual toggle. Plan names and feature lists are data-driven but context is thin.

Recommended Changes:

1. **Add a header "What's included in each plan" with a detailed comparison table below the cards** — not just checkmarks but short descriptions:
   - AI Search Quota: "50 natural language searches per user per month"
   - Recommendations: "AI-suggested profiles shown on the dashboard"
   - Analytics: "Partner sees aggregate data — searches/month, active users, popular searches"
2. **Add AI Search Quota row explicitly:**

Feature	Starter	Growth	Enterprise
AI Search (per user/month)	50	200	Unlimited

3. **Add "What happens when quota runs out?"** — small tooltip or FAQ entry: "*Users can still use structured search. AI search resumes next month. Partners can upgrade anytime.*"
4. **Add "Partner Revenue Model" banner:**

> 💡 You charge your users. We charge you. Set your own plan prices for your members.

5. **Simplify currency** — currently showing INR (`₹`). If targeting global partners, add a currency toggle (INR / USD).

5.4 Partners Page (`/partners`)

Current: Hero + benefits + CTA sections.

Recommended Changes:

1. **Add "Partner Journey" step-by-step section:**

```
 Step 1 → Sign the partner agreement
Step 2 → Share your brand assets (logo, colors, domain)
Step 3 → We configure your tenant (48 hours)
Step 4 → We deploy your site — you test it
```

```
Step 5 → Go live — your users start registering
Step 6 → You grow — AI search, matchmaking, events, payments — all working
```

2. **Add "Live Partner Showcase"** — screenshots of chaturvarnam and matamatrimony with:
   - Partner name + tagline
   - Community size (if shareable)
   - Domain name as a clickable link
3. **Add Partner Benefits in business terms:**
   - "No dev team needed — we maintain the entire tech stack"
   - "Automatic feature upgrades — when we ship AI improvements, all partners benefit"
   - "Your data stays yours — zero lock-in, export anytime"
4. **Replace generic CTA with a two-track CTA:**
   - **Track 1 — Small Community Leader:** "I run a community or temple matrimony service" → contact form with lower-tier options
   - **Track 2 — Established Business:** "I run a matrimony company" → enterprise inquiry with SLA discussion

---

5.5 About Us Page (`/about-us`)

Recommended Structure:

1. **Mission:** *"We exist to help matrimony organizers — from community volunteers to professional matchmakers — run their service with enterprise-grade technology, without enterprise-grade cost or complexity."*
2. **What Makes EkamBond Different:**
   - Built by matrimony practitioners, not generic SaaS engineers
   - The profile model was designed around Indian matrimony nuances (family reference, property, lifestyle, horoscope-ready)
   - White-label means clients own their brand — EkamBond is invisible to end-users
3. **The Tech:**
   - React / Next.js frontend (modern, fast)
   - Node.js + TypeScript API
   - Azure Blob for photo storage
   - Stripe for payments
   - AI search powered by LLM providers
4. **Vision** — Support 100+ partner communities across South Asia and diaspora globally

---

5.6 FAQ Page (`/faq`)

Add these critical partner-centric questions:

1. **How long does onboarding take?** — 48 hours for the website, plus testing
2. **Do my users see "EkamBond" anywhere?** — No. Full white-label. Your brand only.
3. **Can I use my own domain?** — Yes. Custom domain setup is standard.
4. **What happens to my data if I leave?** — Export your data at any time, no lock-in.
5. **How does AI search work?** — Users type plain English. Our AI extracts filters and returns matching profiles. Each plan has a monthly quota.
6. **Can I set my own subscription prices for my users?** — Yes. You define plan names and prices. We process payments via Stripe.
7. **Do I need a developer to manage the site?** — No. Content and config changes require no code changes.
8. **What is the profile completion score?** — A percentage shown to users indicating how complete their profile is. Higher completion = better matches.
9. **Are profiles background-checked?** — BG verification is on the roadmap for Q3 2026. Currently users can upload documents voluntarily.
10. **Is pricing in INR only?** — Currently INR. USD pricing available for international partners — contact us.

---

6. New Pages Recommended

6.1 `/how-it-works` (NEW)

A visual explanation for prospective partners:

- Partner signs up
- Tenant config is filled out
- Site deployed with their branding
- Users register and build profiles
- Matchmaking, AI search, events, payments — all built-in

6.2 `/demo` (NEW) — or link to external

- Embed a screen recording of the partner dashboard (profile creation → AI search → recommendation)
- Alternatively, link directly to a sandboxed demo tenant

6.3 `/showcase` (NEW)

- Grid of deployed partner websites
- Each card: logo, name, tagline, domain link, "Powered by EkamBond" badge

---

7. Why EkamBond Has No Equivalent Competitor

What competitors do	What EkamBond does
B2C matrimony apps (Shaadi, BharatMatrimony, Jeevansathi) — serve end-users directly	EkamBond serves **the businesses** that serve end-users
Generic website builders (Wix, WordPress) — no matrimony domain knowledge, no AI search, no profile model	EkamBond is **purpose-built for matrimony** — 9-section profiles, AI search trained on matrimony context
CRM or matchmaking software — backend tools only, no user-facing UI	EkamBond delivers a **complete user-facing product** — search, favorites, dashboard, billing — white-labeled for the partner
No competitor combines: white-label UI + backend API + AI search + Stripe billing + matrimony-domain profile model	EkamBond does all five as one managed platform

The message to communicate: *"If you are in the matrimony business — whether you are a community organizer, a professional matchmaker, or a regional matrimony brand — EkamBond is your complete tech team. We've built what would take a dev team 2 years to build. You get it in 48 hours."*

---

8. Tone & Branding Recommendations

Current Tone	Recommended Tone
Generic SaaS marketing ("AI-Powered", "Global Reach")	Specific and credible ("50 AI searches/month on Bronze", "9-section profile")
B2C-style hero image and copy	B2B pitch-deck clarity — ROI, onboarding speed, cost savings
Feature names without explanation	Each feature with a 1-sentence "what it does for your business"
No social proof from partners	Partner testimonials with name, organization, community size
No urgency	"Join the growing network — applications reviewed within 48 hours"

---

9. Priority Order for Implementation

Priority	Task	Effort
P0	Rebuild `/features` page with actual feature list (all 9+ profile sections, AI search, payments, white-label)	2–3 days
P0	Update homepage MatrimonyServices section with richer descriptions + Partner Journey section	1 day
P1	Add AI Search spotlight section to homepage	1 day
P1	Enhance pricing page with AI quota row + "what it means" tooltips + Partner Revenue Model banner	1 day

P1	Add Partner Journey steps + Live Showcase to `/partners`	1 day
P2	Add FAQ entries (10 partner-centric questions listed above)	0.5 day
P2	Create `/how-it-works` page	2 days
P2	Create `/showcase` page with deployed partner examples	1 day
P3	Update About Us with technical credibility section	1 day
P3	Add competitive differentiation block to homepage	1 day

---

10. Partner Admin Portal — The Biggest Undocumented Gap

> **Source:** `ekam-partner-admin-v4` (API + UI)

The platform ships a **full-featured partner admin portal** (`ekam-partner-admin-v4`) that is completely invisible on the EkamBond marketing website. This is arguably the single biggest gap — because the admin portal is what justifies the platform's B2B value proposition.

10.1 What the Admin Portal Contains

Dashboard

- **Profile Metrics** — Total profiles, active/inactive counts, gender breakdown, new registrations this month
- **Payment Metrics** — Revenue, active subscriptions, recent transactions
- **Activity Metrics** — Login activity, search activity, favorites, profile views
- **Recent Activities Feed** — Live admin activity timeline

Profile Management (CRUD)

- **Paginated profile list** with search, status filter (active/inactive), and gender filter
- **Full profile viewer** — shows all 9 profile sections (personal, address, education, employment, family, lifestyle, hobbies, photos, property)
- **Admin can create profiles** on behalf of users (manual entry flow)
- **Partial profile update** — admin can edit any section
- **Toggle status** — admin can activate or deactivate any profile (with audit trail)

Background Check Module

- **Initiate check** on any profile — triggers an external background verification workflow
- **Check history** visible per profile
- *This is LIVE in the admin portal while still marked "Coming Soon" on the marketing site*

Brand Config Editor (Server-Driven White-Label)

- Partner-admin can update brand config **from the portal UI** — persisted to the database, no code deployment required
- Config includes:
  - **6 template presets**: modern, classic, elegant, corporate, minimal, vibrant
  - **Brand name** and **tagline**
  - **Logo URL**, small logo, and favicon
  - **Primary / secondary / accent colors** (HSL)
  - **Font family**
  - **Border radius**
  - **Sidebar style**: standard, slim, dark, branded
  - **Login layout**: centered, split, fullscreen
  - **Header style**: minimal, branded, compact
  - **Custom CSS** — arbitrary CSS injected at runtime
- Brand config is returned with the **login response** — applied immediately with zero extra API calls

Admin User Management (RBAC — 3 roles)

Role	Access
`partner-admin`	Full access — dashboard, profiles, brand config, admin users, audit log
`account-admin`	Dashboard + profiles (read-only)
`support-admin`	Profiles (CRUD) + background checks

- Partner-admin can **create, update, activate/deactivate** account-admin and support-admin users
- Self-protection: partner-admin cannot deactivate their own account
- Role restriction: partner-admin role cannot be created via UI (prevents privilege escalation)

Audit Log (Compliance-Grade)

- Every admin action is recorded with: action type, entity affected, who did it, when, from what IP, and full before/after data snapshot
- Tracked events: login, admin user create/update/activate/deactivate, brand config changes, profile status changes
- Filterable by: action type, username, entity, date range
- Sensitive data (passwords, tokens) is sanitized (`***`) in logs

Billing & Payments (Admin View)

- Admin view of partner billing/subscription data
- Payment history accessible to admin portal

10.2 Gap: None of This is on the EkamBond Website

The marketing website says "Partner Onboarding" with 5 words. The reality is a **production-grade admin portal** with:

- Multi-user team management (3 roles)
- Live brand config editor
- Profile moderation tools
- Background check initiation
- Compliance-level audit trail
- Payment oversight

10.3 Page-by-Page Additions for the Admin Portal Gap

Add to Features Page — "Partner Admin Portal" Sub-section

Create a dedicated block with these headings:

1. **Your Command Center** — "A full management dashboard: see how many profiles are active, who's subscribing, what your team is doing."
2. **Moderate Profiles** — "View, edit, activate, or deactivate any member profile. Flag issues. Initiate background checks — all from one screen."
3. **Live Brand Updates** — "Change your logo, colors, or layout template instantly from the portal. No code. Reflects in seconds."
4. **Manage Your Admin Team** — "Add account managers or support staff with the exact access level they need. Role-based. Audited."
5. **Audit Trail** — "Every admin action is logged — who changed what, when, from where. Full before/after snapshots. Compliance-ready."

Add to Partners Page — "What You Get on Day 1"

- ✅ Partner admin portal with full profile management
- ✅ Live brand config editor (change theme without touching code)
- ✅ Team accounts with role-based access
- ✅ Audit trail for compliance
- ✅ Background check module
- ✅ Dashboard with real-time metrics

Add to Pricing Page — "Admin Portal Features"

Feature	Starter	Growth	Enterprise
Admin portal access	✅	✅	✅
Brand config editor	✅ Basic	✅ Full	✅ Full + Custom CSS
Admin team seats	1	3	Unlimited
Audit log retention	30 days	90 days	1 year

Background checks	—	✅	✅

Add to FAQ Page

- **"Who manages my members?"** — You use the EkamBond partner admin portal. You can have a team of admins with different access levels.
- **"Can I change my site's look after launch?"** — Yes. Open the brand config editor in your admin portal. Change template, colors, logo, fonts — live in seconds.
- **"Do I get logs of admin activity?"** — Yes. Every action by every admin is logged with full before/after data. Available in the audit log section.
- **"Can I block or deactivate a member?"** — Yes. You can activate or deactivate any profile from the admin portal. Action is logged automatically.

10.4 Add a New Page: `/admin-portal` (Demo / Feature)

Suggested Sections:

1. **Hero** — "Your Platform, Your Control" — screenshot of the admin dashboard
2. **Dashboard Preview** — Metrics (profiles, payments, activity)
3. **Profile Management** — List view + detail view screenshot
4. **Brand Config Editor** — Before/after theme change demo (show saffron → navy → emerald)
5. **Team Management** — Roles diagram (partner-admin → account-admin / support-admin)
6. **Audit Trail** — Sample audit log table screenshot
7. **CTA** — "Want to see it live? Request a demo →"

---

11. Revised Priority Order (Including Admin Portal)

Priority	Task	Effort
P0	Rebuild `/features` page — add "Partner Admin Portal" section with all 5 capabilities	2 days
P0	Update `/partners` page — add "What you get on Day 1" list including admin portal	0.5 day
P0	Update homepage — add AI Search spotlight + Platform Differentiation block	1 day
P1	Enhance pricing page — add admin team seats, audit retention, background checks rows	1 day
P1	Add partner journey steps + live showcase to `/partners`	1 day
P1	Create `/admin-portal` page with screenshots/demo walkthrough	2 days
P2	Create `/how-it-works` visual flow page	2 days
P2	Update FAQ with admin portal questions	0.5 day

P2	Create `/showcase` page with deployed partner examples	1 day
P3	Update About Us with technical credibility section	1 day
P3	Add competitive differentiation block to homepage	1 day

Document created: March 2026 Prepared by: Antigravity AI Analysis Scope: EkamBond partner-facing website rebranding strategy Updated: March 2026 — Added Partner Admin Portal gap analysis (Section 10)
